Trend Micro Product Integrations with Logsign SIEM & SOAR

Trend Micro Product Integrations with Logsign SIEM &SOAR

Executive Summary

Cyberthreats are now incredibly sophisticated. In the past, all you had to worry about was simply preventing outside threats from attacking your organization. But today, it's very difficult to determine whether a threat is real or not, and established antivirus methods are less effective than they used to be. Newer anti-malware technologies are better but don't guarantee full protection, and even when several are combined on a single endpoint they are incompatible with each other. Another important factor to consider is that users are more vulnerable to attack because they can access corporate resources and cloud services from any location and on a wide range of devices. In other words, this increased access creates more opportunities for attackers.

To address these issues, it is critical that you have intelligent, connected, and enhanced endpoint security. The integration of Logsign SIEM & SOAR solutions and Trend Micro® solutions achieve these goals. The Logsign SIEM is a central security information and event- management platform that oversees and protects organizations' security systems, and mitigates and decreases threats. Additionally, the Logsign SOAR conducts thorough analysis of complicated threats, automates recurring events, analyzes network and identity behavior, and preemptively counters threats.

The security provided by the integrations of Logsign SOAR&Trend Micro® and the Logsign SIEM&Trend Micro® platforms will protect your security assets. You can rest assured knowing that your organization is secure by integrating with two companies that possess a track record of success.

Challenges

Ineffective and burdensome procedures hinder effective cybersecurity strategies and responses, no matter how qualified and skilled cybersecurity professionals are. Furthermore, the majority of security devices don't communicate or learn from each other, which makes them incapable of responding collectively to threats.

Solution

Integrating your security assets with the Logsign solutions and Trend Micro® platforms together delivers effective cybersecurity solutions. These include conducting exhaustive investigations, detecting targeted and untargeted attacks, and, for each device, automatically categorizing detections according to the threat level to the organization and the likelihood of attack. Logsign SOAR offers adaptable security actions such as isolating or quarantining a host, killing a malicious process, and blacklisting for IoCs (IPS, URLs, Hashes).

Solution Benefits Logsign SIEM and Trend Micro® Products

To ensure organizations are protected, rapid detection is absolutely essential. Cyberthreats are not only highly complex, they are always changing, and new, even more sophisticated ones emerge regularly. This is where the Logsign SIEM and Trend Micro® platform integration excels. It conducts comprehensive threat hunting to detect, in real-time, any questionable actions or internal and external threats in emails, files, and the web. It also provides simultaneous security automations to cut response times to events and mitigate risks.

Solution Benefits Logsign SOAR and Trend Micro® Products

Cybersecurity threats and incidents cannot go unanswered; they must be examined methodically and eradicated. Integrating with Logsign SOAR and Trend Micro® products, like Apex One, guarantees simultaneous rapid detection of IoCs and determination of attack vectors and actions at multiple points.

Trend Micro® products, with their advanced detection abilities, and Logsign SOAR integration provide comprehensive investigation, eradicate all real-time threats. In short, Trend Micro® products uncover threats and attacks, and Logsign SOAR blocks any threat indicator.

About Trend Micro

Trend Micro, a global leader in cybersecurity, helps make the world safe for exchanging digital information. Leveraging over 30 years of security expertise, global threat research, and continuous innovation, Trend Micro enables resilience for businesses, governments, and consumers with connected solutions across cloud workloads, endpoints, email, IIoT, and networks.
Our XGenTM security strategy powers our solutions with a cross-generational blend of threat- defense techniques that are optimized for key environments and leverage shared threat intelligence for better, faster protection.
With over 6,800 employees in 65 countries, and the world's most advanced global threat research and intelligence, Trend Micro enables organizations to secure their connected world.
Trend Micro's "Trenders" are passionate about doing the right thing to make the world a safer and better place.

About Us
Logsign was established in 2010 to enable cyber security practitioners to work more efficiently with smart, clutter-free and next-generation softwares. Securing the IT systems and managing cyber security operations should not be so complex, time consuming and over-priced. This is why we developed our smart and simple-to-use SIEM and SOAR softwares considering the market's current and future needs. Automation starts the new era in cybersecurity. We believe with this era, automation handles the manual workload of humans upto 98%. Thus, efficiency in cybersecurity operations is not a dream anymore. SOAR software is in the heart of operations enhancing security teams work in a smart, collaborative and effective environment. You can't protect before you see and detect. Collecting any data, visualizing and turning into actionable intelligence are possible via our infinitely scalable and cluster SIEM. With 10 years of experience, Logsign is a sincere team player for all internal & external parties, trusted by more than 500 enterprises, ministries and state agencies.
